AI-Supported Enterprise Software, ERP & Infrastructure Automation Developer | Istanbul, Turkey

Summary

As a Management Information Systems graduate, I work at the intersection of enterprise systems, DevOps/cloud infrastructure, and AI-supported business applications. I focus on transforming complex business processes into sustainable, observable, and operationally aligned technical systems across ERP, CRM, decision support systems, RAG-based applications, and infrastructure automation. I develop sustainable technical solutions that combine software development, system infrastructure, and business process analysis using TypeScript, Python, SQL, Linux, Docker, and REST APIs.

Experience

AI Innovator Intern

July 2026 – September 2026

Microsoft, Levent, Istanbul — Hybrid

- Developed an enterprise AI application within the Microsoft AI Innovators Summer Internship Program.
- Conducted Azure AI Foundry Local integration, local model configuration, query testing, and technical documentation.
- Created validation scenarios to evaluate model response consistency against source context.

AI Solutions Developer Intern

May 2026 – Present

Logosoft Bilişim Teknolojileri A.Ş., Ümraniye, Istanbul — On-site

SAP Business One, ERP Systems, Python, Flask, REST API, AI Agents, Business Process Automation

- Contributed to AI-supported ERP automation and business process improvement initiatives within SAP Business One and enterprise application environments.
- Supported the design and development of AI-driven automation workflows for ERP-focused business processes.
- Handled backend, integration, and process analysis tasks for enterprise software use cases.
- Analyzed data and process flows between business units and technical systems to identify actionable automation scenarios.
- Contributed to solution development, testing, and documentation across AI agents, REST API structures, and ERP systems.

Education

B.Sc., Management Information Systems

2022 – 2026

Istanbul Gelisim University

GPA: 3.10 / 4.00

Relevant Courses: ERP, Database Management, Systems Analysis, CRM & Decision Support Systems

Certifications

IBM DevOps and Software Engineering Professional Certificate

March 2026

IBM / Coursera — Linux, Git, CI/CD, Docker & Observability

Network Engineering Professional Certificate

May 2025

Akamai Technologies / Coursera — TCP/IP, Routing, Linux Network Tools, Network Security & Operations

Projects

Local LLM-Based Enterprise Document RAG System

July 2026 – September 2026

Microsoft Internship Project | Azure AI Foundry Local, SQLite, Python

- Developed a RAG architecture for enterprise documents using local LLM and SQLite-based embedding storage.
- Built a data pipeline comprising document parsing, text chunking, embedding generation, indexing, and similarity-based retrieval.
- Implemented source-context-grounded response generation; prepared test scenarios and technical architecture documentation.

AI-Supported Operational CRM & Decision Support Platform

March 2026 – Present

Personal Project | React, TypeScript, Express.js, SQLite | GitHub

- Built a modular UI for managing customers, products, quotes, and tasks using React, TypeScript, and Vite.
- Created a REST-based backend with Express.js and SQLite, including relational data modeling and database migration structure.
- Developed an OCR-based product data extraction and structured record creation workflow.
- Built an AI insights panel that generates summaries, priority scores, and action recommendations from customer and task data.

AI-Supported Infrastructure Management & Automation Platform

February 2026 – June 2026

Graduation Project | Docker, Docker Compose, Linux, Git, LLM API | GitHub

- Developed a modular infrastructure with Docker and Docker Compose behind a reverse proxy, consisting of isolated services.
- Built an AI-supported monitoring and recommendation mechanism analyzing CPU, RAM, disk, and service health.
- Designed a controlled execution flow where model outputs are validated through allowlist and format checks, converted to command/script drafts, and require user approval.
- Implemented allowlist validation, audit logging, Git-based versioning, rollback, and backup mechanisms.

ERPNext Self-Hosted Deployment & Operations Infrastructure

October 2025 – January 2026

University Project | ERPNext, Docker, K3s, GitOps, Prometheus, Grafana | GitHub

- Set up two self-hosted deployment environments for ERPNext using Docker and K3s; configured CRM, sales, purchasing, inventory, accounting, and reporting modules.
- Implemented lead-to-cash, purchase-to-pay, and stock movement processes with role-based access control and approval workflows.
- Created service health, resource utilization, and uptime monitoring dashboards with Prometheus and Grafana.
- Designed log management, update, backup, and GitOps-compliant deployment processes.

Technical Skills

- **Programming & Backend:** TypeScript, JavaScript, Python, SQL, Bash, React, Vite, Express.js, Flask, REST API
- **AI & Enterprise Automation:** Azure AI Foundry Local, RAG, embeddings, document indexing, contextual search, AI agents, business process automation
- **Databases:** SQLite, PostgreSQL, MariaDB
- **ERP & Business Processes:** SAP Business One, ERPNext, CRM, sales, purchasing, inventory, finance & approval workflows
- **DevOps & Infrastructure:** Linux, Docker, Docker Compose, K3s, Git, CI/CD, GitOps, reverse proxy, Prometheus, Grafana, log & uptime monitoring
- **Networking & Systems:** TCP/IP, routing, DNS, WireGuard, tcpdump, nmap, traceroute, ss

Languages

- **English:** B1 – Intermediate
- **Turkish:** Native
